

FORAGE HARVESTER

Forage Harvester is used for harvesting every kind of green fodder and grass in order to feed the animals directly or for making silage. The free floating knives on the rotor are specially designed in order to prevent the damage to the machine when they hit a hard material like stones in the field. The rotating speed of the rotor and knives create the blow needed to blow the cut grass to the trailer. The height adjustment can be easily controlled by the spring controlled adjusting pin on the chassis.

Model	Number Of Knife	Length Of Transport	Length Of Work	Chopping Length	Height	Width	Working Width	Capacity	Weight	Required Power
	pcs	cm	cm	cm	cm	cm	cm	ton/h	kg	hp
